“ABOUT THE PERSONAL STATE” IN UKRAINE

Any public institute is based on a trust. The state in this sense is not an exception. If indexes of trust to the Ukrainian state, which demonstrate questioning of public opinion in Ukraine, were true, then a country did not exist already. A trust to the state in Ukraine, which is measured by sociologists, touches public activity of the state. But there is unpublic activity of state agents, which enjoys the confidence of Ukrainians and does not allow to the state to disappear. Such activity can be named the “personal state”. Ukrainians are interested in existence of the phenomenon of the personal state, as it is not only the how hardly not unique method, allowing to them to “decide the questions” with the state but also one of the most accessible methods of socialization. Such order is simple enough in addition. He requires from Ukrainians nothing except for acquaintances with “necessary peoples”.

The personal state is a set of “necessary people” which decide the personal questions of Ukrainians with the state. “Necessary peoples” are not obligatory public administrators. It those, who organizes communications. Every Ukrainian can play role of “necessary man”, when helps other people to “decide questions” with the state. Each such question creates the situation chainlet of the “necessary people involved in his decision”. Therefore

each such question creates the situation state. There is not the state of Ukrainians in Ukraine, however there is an aggregate of the personal states of every Ukrainian. When citizens deal with the classic state, then they deal with a function. Does not matter what is official’s which decides the question of citizen name. Important, that he is the function of decision of question. In the personal state an official Ivan Ivanovich is not nearly the same, that official Peter Petrovich. And the function of official does not have the special value. Status of official which allows to choose one or another function to him is important. In the personal state typical is a situation, when for the decision of question, for example, with a tax inspector, a citizen speaks to the acquaintance. to stomatology.

Officials in such state not only passively wait requests about a help in the “decision of questions”, but foremost create situations, when it is impossible to treat without them. Activity on providing of the personal services for officials in Ukraine is basic. Otherwise public places in Ukraine were not bought. In such situation on publicly useful activity officials do not simply have time.

For creation nationalization of the personal state is needed in Ukraine of the classic state.
